Beacon Labs VSO Partner Packet

Veteran Service Organizations Partnership Program

Executive Summary

Beacon Labs builds autonomous AI agents that help veteran-owned businesses reclaim their time, scale their operations, and build lasting legacies. We are not a software company selling subscriptions — we are a mission-driven team that deploys intelligent automation systems tailored to the specific needs of small business owners.

This packet outlines a formal partnership opportunity for Veteran Service Organizations (VSOs) — including chapters of the VFW, DAV, American Legion, AMVETS, and similar organizations. Through a simple referral relationship, your chapter can connect veteran entrepreneurs with tools that genuinely change how they operate, while generating a meaningful revenue stream for your chapter's programs and services.

We believe the organizations that have supported veterans through service should also support them through success. That is the foundation of this partnership.

---

1. The Mission: Why We Partner with VSOs

Veterans have served with discipline, adaptability, and a mission-first mindset. Many carry those same qualities into entrepreneurship — and they deserve the same quality of support in business that they received in service.

Beacon Labs was built with a specific mandate: to make enterprise-grade automation accessible to small business owners who have been priced out of it. Veteran-owned businesses are a priority population for us. They are often under-resourced, over-committed, and running operations that could be dramatically simplified with the right tools.

VSOs are the most trusted institutions in the veteran community. When a VSO chapter recommends a resource, its members listen. That trust is something we do not take lightly. This partnership is designed to honor it — by ensuring that every referral we receive results in a genuine, measurable improvement in that veteran's business.

---

2. The Problem: Veteran Business Owners Are Overwhelmed

The statistics on veteran entrepreneurship are encouraging on the surface — there are approximately 2.5 million veteran-owned businesses in the United States, generating over $1.2 trillion in annual revenue. But behind those numbers is a more complex reality.

Most veteran-owned businesses are small. The owner is often the operator, the salesperson, the customer service representative, and the bookkeeper — all at once. The result is a business that is perpetually reactive, unable to grow because the owner is consumed by the daily demands of keeping it running.

The specific challenges we hear most often from veteran business owners include:

- **Time poverty:** There are not enough hours in the day to handle operations and pursue growth simultaneously.
- **Follow-up failures:** Leads go cold because there is no system to nurture them consistently.
- **Missed opportunities:** Appointments are not booked, inquiries go unanswered, and revenue is left on the table — not from lack of effort, but from lack of capacity.
- **Technology overwhelm:** Most automation tools are designed for large teams with dedicated IT staff. They are too complex, too expensive, and too time-consuming to implement for a solo operator or small team.

This is the gap Beacon Labs was built to close.

---

3. The Solution: Autonomous AI Agents (Explained Simply)

An autonomous AI agent is a software system that performs tasks on behalf of a business owner — automatically, consistently, and without requiring constant supervision.

Think of it as a reliable team member who never sleeps, never forgets a follow-up, and never has a bad day. The agent handles the repetitive, time-consuming work so the owner can focus on the work that actually requires their expertise and judgment.

What our agents do for veteran business owners:

Task	What the Agent Does
Lead follow-up	Automatically contacts new leads within minutes of inquiry, via text or email
Appointment booking	Manages scheduling, sends reminders, and handles rescheduling without human intervention
Customer re-engagement	Identifies dormant customers and sends personalized outreach to bring them back
Review generation	Requests reviews from satisfied customers at the right moment in the relationship
Reporting	Delivers weekly summaries of business activity so the owner stays informed without digging through data

No technical expertise is required. We handle the setup, configuration, and ongoing maintenance. The veteran business owner simply benefits from the results.

---

4. How the Partnership Works

The partnership structure is straightforward and transparent. There are no complicated agreements, no minimum referral quotas, and no cost to the VSO chapter.

Step 1 — Referral. Your chapter identifies veteran business owners who are struggling with growth, time management, or operational efficiency. You share our information with them — through your newsletter, at chapter meetings, or via a dedicated referral link we provide.

Step 2 — Consultation. Beacon Labs conducts a free, no-obligation consultation with the referred veteran. We assess their business, identify the highest-impact automation opportunities, and present a clear proposal.

Step 3 — Enrollment. If the veteran chooses to work with us, your chapter receives a referral commission. The commission structure is tiered based on the service package selected, and payments are made monthly with full transparency reporting.

Step 4 — Ongoing relationship. We keep your chapter informed of the outcomes for referred members. Success stories (with permission) can be shared back with your membership to demonstrate the program's impact.

Revenue Share Structure:

Service Tier	Monthly Value	Chapter Commission
Starter Automation	$497/month	$100/month (first 6 months)
Growth Automation	$997/month	$200/month (first 6 months)
Full-Scale Deployment	$1,997/month	$400/month (first 6 months)

Commissions are paid for the first six months of each active client relationship. A chapter that refers ten active clients at the Growth tier generates $2,000 per month in chapter revenue for six months — with no ongoing obligation.

---

5. Benefits to the VSO Chapter

Financial sustainability. Chapter programs depend on funding. The referral commission structure creates a predictable, recurring revenue stream that can support veteran services, events, and operations without relying solely on dues or donations.

Member value. Your members are not just veterans — many are business owners, entrepreneurs, and community leaders. Providing them with access to tools that

genuinely improve their businesses strengthens your chapter's relevance and value proposition.

Mission extension. The VSO mission does not end at transition assistance or benefits navigation. Supporting veteran economic success is a natural and powerful extension of that mission. This partnership gives your chapter a concrete, modern way to demonstrate that commitment.

Co-marketing support. Beacon Labs will provide your chapter with co-branded materials, educational content, and joint webinar opportunities to help you communicate the program to your membership effectively.

---

6. Next Steps

We are ready to move quickly. The process from initial conversation to active partnership can be completed in under two weeks.

To begin:

1. Contact our Partnership Team to schedule a 30-minute introductory call.
2. We will walk you through the program in detail, answer any questions, and customize the agreement to fit your chapter's needs.
3. You will receive your referral toolkit — including your unique referral link, co-branded materials, and a simple one-page member handout.
4. Begin referring, and start generating results for your members and revenue for your chapter.
